

# XL-1394

## FireWire Power Conditioning Cable

### Description

The XL-1394 FireWire Filter reduces electrical line noise from 7-Series recorders (702, 702T, 722, and 744T) when recording to external bus-powered hard drives or DVD writers. The sensitive microphone preamplifiers in 7-Series recorders may pick up electrical line noise when an external drive is powered by the 7-series recorder.

### How to Use

- Connect the XL-1394 to the 702, 702T, 722, or 744T recorders using the attached 1394 FireWire cable.
- Connect external bus-powered hard drive or DVD writer to XL-1394 with the included 6-pin FireWire cable.

### Specifications

- Filter assembly with captive (3 ft.) 6-pin FireWire (male connector) and 6-pin female FireWire connector
- Filter dimensions 1.25" x 2" x 2" (H x W x D)
- 6-pin FireWire cable (3 ft.)

### Note

The XL-1394 is not needed if you are powering external drives from another power source.

The 788T does not require the use of the XL-1394. The power conditioning circuitry of the XL-1394 is integrated into the 788T's design.
