Welcome to the MixPre
VERSATILE. DURABLE. HIGH-PERFORMANCE.

If you record field audio, sound effects, audio for film, podcasts, voice-overs, music, or are just starting your audio journey, the MixPre Series is for you! Lightweight, durable, and small, this powerhouse audio recorder and USB interface will help you capture audio for any application.

With Sound Devices’ hand-crafted, crystal-clear, ultra low-noise Kashmir preamps, you’ll record audio in superior quality.

The MixPre is highly customizable to your needs. Record internally to a compatible SD card on set or stream your podcast over USB to your computer at home. Power with your computer, wall power, or record in the middle of nowhere with AA or Sony L-mount batteries. Adjust limiters, bit depth, sample rates, gain, pan, low-cut, phase inversion and phantom power to your liking. Use the MixPre’s high-precision internal timecode generator to trigger the camera, or feed timecode in. The choice is yours!

Professionals love the flexibility of the MixPre Series. Don’t need all those options? Basic mode has you covered.

All models are rugged, lightweight, and small, so you can throw it in a bag or mount it to a tripod or camera - or get situated on set with our Wingman App and one of our four supported USB control surfaces. With the superior sound and build quality that you can expect from the industry leader in production audio recording, your MixPre can capture audio for any application. Our friendly and knowledgeable support team, based in the USA and Germany, is here for all your questions and comments. Our job is to make your job easier.

We are honored to be part of your kit.

Sincerely,

Sound Devices

CUSTOMIZE WITH PLUGINS
All plugins may be purchased and downloaded from the Sound Devices Store.

Musician Plugin
Easily create a song using the MixPre as a standalone recorder or USB interface. Use onboard features like overdub, bounce, reverb, and tracking to a metronome.

Ambisonics Plugin
Record 360° audio and monitor binaurally with this plugin, an ambisonic microphone, and your MixPre-6 or MixPre-10T.

MixAssist Plugin
Using multiple microphones with your MixPre? Enable MixAssist to reduce unwanted microphone and room noise while recording.

Reporter Plugin
Simplify the settings of your MixPre so your contributors can focus on capturing great content. The Reporter plugin allows you to configure your MixPre-3 or MixPre-6 in advance and then lock the menus. Send it off with a journalist, interviewee, or other contributor in confidence!

Plugin features and functionality are detailed in the respective Plugin User Guides.

Panel Views

**MIXPRE-3**

**POWER LED** Glows when the MixPre is powered on.

**CHANNEL KNOBS** Sets the input gain for the channel. Press in on knob to access channel screen.

**CHANNEL LED RING** Provides visual indication of channel signal condition, solo and mute.

**PLAY BUTTON** Press to begin playback. While in playback the button glows green. See Transport.

**STOP BUTTON** Press to stop recording or playback. While stopped the button glows orange. See Transport.

**RECORD BUTTON** Press to begin a recording. While recording the button glows red. See Transport.

**TOUCH SCREEN** The sunlight-viewable, high-resolution, touch-screen is used to navigate the MixPre user interface.

**BATTERY CONTACTS** Accepts power sled accessories designed for MixPre. Allows powering from AA or Sony L-Mount batteries, such as the included MX-4AA.

**SD CARD SLOT** Insert SD card for recording.

**ALLEN WRENCH & ANTI-ROTATIONAL PIN** Magnetically attaches to the MixPre for safe keeping. Used to attach MixPre to cameras and tripods via ¼-inch-20-thread captive screw on MixPre top panel.

**INPUTS 1-3 FEMALE XLR JACKS** Active-balanced analog microphone or line-level inputs. Inputs 1-2 on left panel, input 3 on the right. [pin-1 = ground, pin-2 = hot (+), and pin-3 = cold (-)]

**USB-A PORT**
1. USB keyboard.
2. USB to approved 3rd party control surfaces.
3. USB hubs to support multiple devices.

**USB-C PORT**
1. Provides power to the unit.
2. Connects to computer as a USB Audio Interface.
3. Connects to computer for transferring files from the SD card.

**STEREO OUTPUT** Unbalanced stereo 3.5 mm female connector. Routing determined in the Outputs menu. [Sleeve = ground, tip = X1, ring = X2].

**POWER SWITCH** Turns the power on and off.

**HEADPHONE OUTPUT** 3.5 mm TRS headphone output. Warning! This output can drive headphones to potentially dangerous levels. [Sleeve = ground, tip = left, ring = right]

**HEADPHONE KNOB**
1. Rotate to control headphone volume.
2. Rotate to navigate some menus and the virtual keyboard. Press in to select items.

**AUX/MIC/TIMECODE INPUT** Menu-selectable input. Accepts unbalanced stereo audio signal, Plug in Power microphones, or LTC timecode.

**HDMI TC INPUT** Connect to select cameras to receive HDMI time-code and record start/stop flags.
MixPre-6

**POWER LED** Glows when the MixPre is powered on.

**CHANNEL KNOBS** Sets the input gain for the channel. Press in on knob to access channel screen.

**CHANNEL LED RING** Provides visual indication of channel signal condition, solo and mute.

**STAR (*, **) BUTTON** Provides a user-assignable hardware button to frequently used functions. See Shortcuts.

**PLAY BUTTON** Press to begin playback. While in playback the button glows green. See Transport.

**STOP BUTTON** Press to stop recording or playback. While stopped the button glows orange. See Transport.

**RECORD BUTTON** Press to begin a recording. While recording the button glows red. See Transport.

**TOUCH SCREEN** The sunlight-viewable, high-resolution, touch-screen is used to navigate the MixPre user interface.

**BATTERY CONTACTS** Accepts power sled accessories designed for MixPre. Allows powering from AA or Sony L-Mount batteries, such as the included MX-4AA.

**SD CARD SLOT** Insert SD card for recording.

**ALLEN WRENCH & ANTI-ROTATIONAL PIN** Magnetically attaches to the MixPre for safe keeping. Used to attach MixPre to cameras and tripods via ¼-inch-20-thread captive screw on MixPre top panel.

**INPUTS 1-4 FEMALE XLR / 1/4" TRS COMBO JACKS** Active-balanced analog microphone or line-level inputs. Inputs 1-2 on left panel, inputs 3-4 on the right. [pin-1 = ground, pin-2 = hot (+), and pin-3 = cold (-)]

**USB-A PORT**
1. USB keyboard.
2. USB to approved 3rd party control surfaces.
3. USB hubs to support multiple devices.

**USB-C PORT**
1. Provides power to the unit.
2. Connects to computer as a USB Audio Interface.
3. Connects to computer for transferring files from the SD card.

**STEREO OUTPUT** Unbalanced stereo 3.5 mm female connector. Routing determined in the Outputs menu. [Sleeve = ground, tip = X1, ring = X2].

**POWER SWITCH** Turns the power on and off.

**HEADPHONE OUTPUT** 3.5 mm TRS headphone output. Warning! This output can drive headphones to potentially dangerous levels. [Sleeve = ground, tip = left, ring = right]

**HEADPHONE KNOB**
1. Rotate to control headphone volume.
2. Rotate to navigate some menus and the virtual keyboard. Press in to select items.

**AUX/MIC/TIMECODE INPUT** Menu-selectable input. Accepts unbalanced stereo audio signal, Plug in Power microphones, or LTC timecode.

**HDMI TC INPUT** Connect to select cameras to receive HDMI timecode and record start/stop flags.
MIXPRE-10T

**POWER LED** Glows when the MixPre is powered on.

**CHANNEL KNOBS** Sets the input gain for the channel. Press in on knob to access channel screen.

**CHANNEL LED RING** Provides visual indication of channel signal condition, solo and mute.

**TRANSPORT CONTROLS** A joystick (with its illuminated LED ring) on the front panel is used to perform various transport control functions. (see Transport).

**STAR (⁺ &  **) SWITCH** Provides a user-assignable hardware switch to frequently used functions. See Shortcuts.

**TOUCH SCREEN** The sunlight-viewable, high-resolution, touch-screen is used to navigate the MixPre user interface.

**4-PIN HIROSE DC INPUT** Accepts DC voltages from 10–17 V for powering. [pin-4=+, pin-1=-] Works with included XL-WPH3.

**BATTERY CONTACTS** Accepts power sled accessories designed for MixPre. Allows powering from AA or Sony L-Mount batteries, such as the included MX-8AA.

**ALLEN WRENCH & ANTI-ROTATIONAL PIN** Magnetically attaches to the MixPre for safe keeping. Used to attach MixPre to cameras and tripods via ¼-inch-20-thread captive screw on MixPre top panel.

**SD CARD SLOT** Insert SD card for recording.

**INPUTS 1-8 FEMALE XLR / 1/4" TRS COMBO JACKS** Active-balanced analog microphone or line-level inputs. Inputs 1-4 on left panel, inputs 5-8 on the right. [pin-1 = ground, pin-2 = hot (+), and pin-3 = cold (-)].

**BNC TIMECODE OR WORD CLOCK INPUT** Menu-selectable between timecode or word clock functionality. Set to timecode to receive LTC timecode from a camera or timecode generator. Set to word clock to sync to an external clock source.

**USB-A PORT**
1. USB keyboard.
2. Auto-copy to USB drives.
3. USB to approved 3rd party control surfaces.
4. USB hubs to support multiple devices.

**USB-C PORT** Used to connect to a computer for USB audio or transferring files from the SD card.

**X1/X2 OUTPUT** Unbalanced stereo 3.5 mm female connector. Routing determined in the Outputs menu. [Sleeve = ground, tip = X1, ring = X2].

**POWER SWITCH** Turns the power on and off.

**HEADPHONE OUTPUT** 3.5 mm TRS headphone output. Warning! This output can drive headphones to potentially dangerous levels. [Sleeve = ground, tip = left, ring = right]

**AUX/MIC/TIMECODE INPUT** Menu-selectable input. Accepts unbalanced stereo audio signal, Plug in Power microphones, or LTC timecode.

**HEADPHONE KNOB**
1. Rotate to control headphone volume.
2. Rotate to navigate some menus and the virtual keyboard. Press in to select items.

**HDMI TC INPUT** Connect to select cameras to receive HDMI timecode and record start/stop flags.

**LEFT & RIGHT TA3 OUTPUTS** +7.8 dBu line level outputs. Routing determined in the Outputs menu. [pin-1 = Ground, pin-2 = hot (+), pin-3 = cold (-)]. Float pin-3 to unbalance.
Powering the MixPre

Apply your choice of power source. Turn the master power switch located in the upper right corner of the left side panel to the On position. To ensure the battery/power status indicator displayed on the touchscreen shows accurate level and status, select your battery/power type in the Power menu.

When using AA batteries to power the MixPre, we recommend Energizer Ultimate Lithium (not alkaline batteries). The high internal resistance of alkaline batteries makes them only suited to devices requiring low current (less than 25 mA), not higher power electronic devices such as the MixPre.

Incorrect use of batteries poses a danger of explosion. Replace only with the same or equivalent type. Properly recycle batteries. Do not crush, disassemble, incinerate, dispose in a fire or expose batteries to high temperatures.

Save power by turning off unused channels.

With multiple options for powering, your MixPre can operate in a wide array of applications and environments.

**MIXPRE-3 AND MIXPRE-6 POWER OPTIONS**
1. Optional MX-PSU AC wall adapter to USB-C power supply.
2. Four AA batteries installed in the included MX-4AA Battery Sled.
3. Eight AA batteries installed in the optional MX-8AA Battery Sled accessory.
4. One or two Sony-type L-Mount batteries installed in the optional MX-LMount battery sled accessory.
5. USB-C to USB-C cable connected to a USB-C host computer or AC wall adapter.
6. USB-A to USB-C cable connected to a USB-A host computer or AC wall adapter. The unit will enter a low power state and some functionality will be limited with this power option.
7. MX-USBY Dual USB-A to USB-C optional accessory cable connected to a USB-A host computer. Use this cable option if your computer is unable to provide adequate power with only one USB-A port.

**MIXPRE-10T POWER OPTIONS**
1. Included XL-WPH3 AC to DC 12 V Power supply with 4-pin Hirose.
2. Eight AA batteries installed in the included MX-8AA Battery Sled.
3. One or two Sony-type L-Mount batteries installed in the optional MX-LMount battery sled accessory.

Power Switchover and Priority

**MIXPRE-3 AND MIXPRE-6**
To preserve battery power, USB-C power sources take priority over batteries if both are connected with one exception - if the USB-C power source does not meet the full power requirements of the MixPre, you can choose to power from battery or continue to power from USB-C. An underpowered MixPre will be able to use two of the three or four channels with 48 V phantom mics. Other channels can still be used with dynamic mics and line level, Aux, or USB sources. In a low power state, the MixPre automatically:

1. Dims LCD and LED Brightness.
2. Disables USB-A port.
3. Disables HDMI TC port.

For protection against accidental loss of power, the MixPre incorporates circuitry to automatically switch over from USB-C to batteries.

**MIXPRE-10T**
For preservation of battery power, 4-pin Hirose power sources take priority over batteries if both are connected. For protection against accidental loss of power, the MixPre-10T incorporates circuitry to automatically switch power sources.
Touchscreen

The MixPre has a sunlight-viewable, high-resolution, touch-screen-based user interface, which consists of the Home screen, Main Menu screen, and Channel screen views. There are several touch zones on the touch screen for controls. As you become familiar with the user interface, changing settings for inputs, outputs, recording and metering will become fast and intuitive.

HOME SCREEN
The Home screen view appears on the touchscreen when the device is powered up.

FILE LIST ICON Touch to enter the File List.
CURRENT FILE NAME Displays the current file name.
TIME COUNTER Displays current timecode value. If timecode is Off, displays time counter of recording file.
CUE MARKER ICON Touch to lay a cue marker during record or play-back. Displays current cue mark point.
POWER STATUS ICON Displays the status of the active power source. See tables opposite for further details.
MENU ICON Touch to enter the setup menu.
METER VIEW Displays audio activity. Touch to toggle through available meter views:
1. Left and Right mix tracks.
2. Left and Right mix tracks with isolated tracks.
3. Left and Right mix tracks, USB inputs 1 and 2, and 2 camera returns (when Aux inputs are set to camera).
STATUS BAR Touch to toggle information displayed:
1. SD card status: card/drive activity, available recording time, file duration, elapsed time, and headphone preset.
2. USB drive status: remaining space on drive, sample rate, bit depth.
3. Sync Source (if external), sample rate, and bit depth.
4. Date and time.
While auto-copying on the MixPre-10T, copy status is displayed on all status bars. Copy status will alternate with default info.

MIXPRE-3 AND MIXPRE-6

## Transport Controls

**MIXPRE-3 AND MIXPRE-6**

The three Transport controls (illuminated buttons) on the front panel are used to perform recording and playback functions.

<table>
<thead>
<tr>
<th>FUNCTION</th>
<th>CONTROL</th>
<th>ACTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Record</td>
<td>![REC]</td>
<td>Press to begin recording a new file. The button illuminates red while recording is underway.</td>
</tr>
<tr>
<td>Stop</td>
<td>![STOP]</td>
<td>While recording, press once to stop recording. While in playback, press once to stop playback. While in standby, press and hold to display next name.</td>
</tr>
<tr>
<td>Play / Pause</td>
<td>![PLAY]</td>
<td>Press to begin playback of the last file recorded or file currently loaded. The button illuminates green during playback. While in playback, press once to pause, and press again to resume playback. Whenever playback is paused, the button and the current file name will flash green.</td>
</tr>
<tr>
<td>Scrub</td>
<td>![HEADPHONE_ENCODER]</td>
<td>While playing or paused, press and hold the headphone encoder to enter Scrub mode. Then rotate clockwise for fast forward or counter-clockwise for rewind at speeds of 0x, 1/8x, 1/4x, 1/2x, 1x, 2x, 4x, 8x and 16x. The audio is heard in Scrub mode up to 2x speed.</td>
</tr>
</tbody>
</table>

**MIXPRE-10T**

A joystick (with its illuminated LED ring) on the front panel is used to perform various transport control functions.

<table>
<thead>
<tr>
<th>FUNCTION</th>
<th>CONTROL</th>
<th>ACTION</th>

</tr>
</tbody>
</table>

**TRANSPORT**: Locks or unlocks transport controls on the MixPre. (Locked, Unlocked*)

**MIXPRE-3**: Play, Stop, Record, and scrub mode on headphone knob. (Locked, Unlocked*)

**MIXPRE-6**: Play, Stop, Record, scrub mode on headphone knob, and the * shortcut. (Locked, Unlocked*)

**MIXPRE-10T**: All joystick controls (record, stop, play, rewind, ff), and */** toggle. (Locked, Unlocked*)

**TOUCHSCREEN**: Locks or unlocks all touch activity of the LCD for all models. (Locked, Unlocked*)

**CH. KNOBS**: Locks or unlocks the front panel gain knobs from making level adjustments and entering the channel screens for all models. (On, Off*)

**HP KNOB**: Locks or unlocks headphone knob press and rotate functions. (Locked, Unlocked*)

If any parameter change is attempted while locked, a popup will appear. Enter the Front Panel Menu and toggle that parameter option Off to regain control of that parameter.

Controls from the Wingman application, USB keyboard or USB MIDI controllers are unaffected by Front Panel Lock Mode.

All Front Panel functions are unlocked when the MixPre is rebooted.
### Choosing your Mode

The MixPre has three different modes of operation to suit you and your application: Basic, Advanced, and Custom. Basic mode is intended for simple, hassle-free, plug-and-play use and beginners. Advanced mode is for professionals and anyone who wants to have every available setting and option at their disposal. Custom mode allows you to select your own mixture of basic and advanced operation.

The MixPre-3 and MixPre-6 default to Basic mode. The MixPre-10T defaults to Advanced mode. To change mode, go to Menu>System>Mode.

### MIXPRE-3 BASIC VS ADVANCED

<table>

Custom Mode

Custom mode allows you to select your own mixture of basic and advanced operation. This mode grants access to select categories of Advanced Mode.

**CONFIGURE CUSTOM SETUP**

1. Set System > Mode to Custom.
2. In System > Custom Setup set each category to basic or advanced.

Custom Setup options are:

<table>
<thead>
<tr>
<th>CATEGORY</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Channel</td>
<td>Allows advanced operation of the following items: Channel Solo, Mute, Track Arm, Pan, Low Cut, Phase, Delay, Channel Linking, and isolated track recording.</td>
</tr>
<tr>
<td>Gain</td>
<td>Allows advanced operation of channel gain, including dual gain stage (gain and fader) and Remix.</td>
</tr>
<tr>
<td>Headphone</td>
<td>Allows access to advanced headphone presets and channel solo.</td>
</tr>
<tr>
<td>Record</td>
<td>Allows advanced operation of isolated track arming and recording, LR track linking and gain, sample rate, and bit depth.</td>
</tr>
<tr>
<td>Metadata</td>
<td>Allows advanced operation in the File List. This includes metadata entry and editing of name, number, notes, track names, and access to the undo recording feature.</td>
</tr>
<tr>
<td>Outputs</td>
<td>Allows advanced operation of Output menu items such as mute, gain, delay, and routing.</td>
</tr>
</tbody>
</table>
Channel Screen - Basic Mode

The MixPre’s flexibility is enhanced by its ability to select various input types to its mixer channels. On the MixPre-3, channels can be sourced from XLR mic/line input, 3.5 mm Aux In or mic input, or from USB channels. On the MixPre-6 and MixPre-10T, channels can be sourced from XLR or TRS mic/line input, 3.5 mm Aux In or mic input, or from USB channels.

Access the channel’s input settings by pushing in the channel’s knob. There are three channel inputs on the MixPre-3, 6 channel inputs on the MixPre-6, and 10 channel inputs on the MixPre-10T.

Channels 5 and 6 on MixPre-6 and 9 and 10 on the MixPre-10T are controlled in the Inputs menu. Input source, gain, pan, and low-cut are all available in this menu.

Channels use a single gain stage adjusted by the knob. Levels set at the channel knob are sent to the LR mix record channels and the LR outputs. Limiters are present on each channel and the LR mix bus and will ensure that your audio is safe from accidental clipping.

**PAN** Pan the channel’s signal Left, Center or Right in the stereo LR mix and Stereo Out.

**LOW CUT** Turn Low Cut filter on or off. Useful for reducing unwanted low frequency in the audio of the select channel. In Basic Mode Low Cut is fixed at 80 Hz.

**INPUT** Select one of the available Mic, Line, Aux (available when Aux In Mode is Mic or Line) or USB inputs as the channel source.

**PHANTOM** Turn on 48 V phantom power when using a condenser microphone in the selected channel (available when Input is Mic).
Channel Screen - Advanced Mode

The MixPre's flexibility is enhanced by its ability to select various input types to its mixer channels. On the MixPre-3, channels can be sourced from XLR mic/line input, 3.5 mm Aux line or mic input, or from USB channels. On the MixPre-6 and MixPre-10T, channels can be sourced from XLR or TRS mic/line input, 3.5 mm Aux line or mic input, or from USB channels.

Access the channel's input settings by pushing in the channel's knob. There are three channel inputs on the MixPre-3, 6 channel inputs on the MixPre-6, and 10 channel inputs on the MixPre-10T.

Channels 5 and 6 on MixPre-6 and 9 and 10 on the MixPre-10T are controlled in the Inputs menu. Input source, solo, mute, arm, gain, pan, low cut, and linking are all available in this menu.

Channels use a dual gain stage. Adjust the gain control in the Channel Screen and fader level with the knob. Limiters are present on each channel and the LR mix bus and will ensure that your audio is safe from accidental clipping.

SOLO Lets you “solo” the selected channel in the headphone output. Solo mode can be set to “Individual” or “Multiple” in the HP menu. When a channel is soloed, the LED ring will flash orange.

MUTE Provides quick access to muting an input.

ARM Allows pre-fade recording of the channel to an individual track on the SD card.

GAIN Sets the sensitivity of the input. Generally, the Gain should be set so that the loudest parts of the audio signal just touch the red segments of the meters. The control knobs on the front panel act as faders.

PAN Lets you position the audio of the channel anywhere between Left and Right in the stereo image of the LR mix and Stereo Out.

LOW CUT Turn Low Cut filter on or off. Useful for reducing unwanted low frequency in the audio of the select channel. Frequency is adjustable from 40, 80, 100, 120, or 160 Hz.

INPUT Select one of the available Mic, Line, Aux (available when Aux In Mode is Mic or Line) or USB inputs as the channel source.

PHANTOM Turn on 48 V phantom power when using a condenser microphone in the selected channel (available when Input is Mic)

PHASE Phase inversion (or polarity reversal) is used to compensate for incorrectly wired, balanced cables, to prevent signal cancellation when a source is dual-mic’d from opposite directions, or to reverse left/right with microphones in a mid-side (MS) configuration.

DELAY Input delay may be used to compensate for ‘phasey’ sounding audio because of time-of-arrival differences between sound sources, such as a boom mic and wireless radio mic picking up the same sound source.

LINKING All MixPre's can link channels 1 and 2 either as a stereo pair, mid side pair, or turn linking off.

<table>
<thead>
<tr>
<th>Input Types</th>

<td>Use for sources coming from a computer via USB-C.</td>
</tr>
</tbody>
</table>
Linking Channels

Are you working with a stereo source—a keyboard or stereo mic perhaps? To make it easy to adjust these types of sources, the MixPre offers linking of channel pairs either as a stereo pair or mid-side (MS) pair.

**STEREO PAIR LINKING**
Control the level of both channels 1 and 2 with the Channel 1 knob. The Channel 2 knob will now function as a balanced control if stereo linked.

**MS PAIR LINKING**
Control the level of both channels 1 and 2 with the Channel 1 knob. The Channel 2 knob will now function as a width control. You can choose to have the MS decoder apply to the mix only and not isolated tracks in the menu Inputs > MS Decode.

**MULTICHANNEL LINKING**
When multiple channels are linked, gain, fader, limiters, track arming, low cut filters, and input delay are all linked and controlled from the single Channel. Additionally, the Link Type menu provides the options for which parameters are linked.

1. All links input type, trim gains, faders, limiters, low cuts, record arms, and delays
2. Faders Only links only fader level.

The MixPre-6 can link channels 1-3 and 1-4.

The MixPre-10T can additionally link channels 1-3, 1-4, 1-5, 1-6, 1-7 and 1-8.

**GAIN STAGING WITH LINKING**
You can use linking with single gain stage or two-gain stage (trim/fader) operation. For instance, users wanting to link inputs 1-2 or 1-4, but control all levels from the front-panel Channel 1 knob should set System > Mode to Custom and then in Custom Setup, set Gain to Basic and Channel to Advanced.

Users wanting to link those same inputs but use two gain stages should use Advanced Mode or Custom mode with both Gain and Channel set to Advanced. Then, you can adjust trim gain levels for linked channels from the Channel 1 screen and adjust fader levels for linked channels with the Channel 1 knob.
Inputs Menu

The Inputs menu allows you to access software-controlled channels (5 and 6 on MixPre-6 or 9 and 10 on MixPre-10T), Aux In Mode settings, MS Decode settings, Knob Press options, Ambisonics (MixPre-6 and MixPre-10T only with optional Plugin), and MixAssist (with optional Plugin).

SOFTWARE-CONTROLLED CHANNEL SCREENS
Channel 5 and 6 on MixPre-6 or channels 9 and 10 on MixPre-10T Channel screens provide access to a channel’s settings and functions. This includes input source, solo, mute, arm tracks, gain, pan, low cut, and linking.

INPUT SOURCE Selects Input source of channels 5 and 6 on MixPre-6 or channels 9 and 10 on MixPre-10T from Off, USB 1-4, Aux In 1, or Aux In 2.

MixPre-6 channel 5 can be set to Aux 1, USB 1, or USB 3 and channel 6 can be set to Aux In 2, USB 2, or USB 4.

MixPre-10T channel 9 can be set to Aux 1, USB 1, or USB 3 and channel 10 can be set to Aux In 2, USB 2, or USB 4.

AUX IN MODE Configures how the Aux/Mic In 3.5 mm connector is used.
1. Mic: Select this option when the Aux/Mic In is to be used with a mic. The MixPre provides bias voltage for PIP (plug-in-power) mics. Aux 1 and 2 are available as input sources to any channel.

2. Line: Select this option when the Aux/Mic In is to be used with an unbalanced 2ch line source, such as smartphone headphone output, stereo line source, etc. Aux 1 and 2 are available as input sources to any channel.

3. Camera: Select this option when the Aux/Mic In is to be used for monitoring a video camera’s audio output via the MixPre’s headphones and camera return (C1/C2) meters located on meter view. This is particularly useful when you want to use the MixPre to drastically improve the sound quality recorded on the camera. It is common knowledge that camera mic inputs are not of high quality so by connecting your mics to the MixPre instead, then connecting the MixPre’s L/R outputs to your camera audio input, you will achieve far superior sound quality. Then by connecting the camera’s audio output to the MixPre’s Aux/Mic In, it allows you to check that the camera audio is noise and distortion-free.

    When this option is selected an additional setting appears in the Input Menu called Camera Gain. This lets you adjust the gain of the incoming camera audio level. You also get additional camera monitoring options in the HP Presets menu.

When Aux In Mode is set to Camera, you cannot route Aux In to a channel and thus you cannot record it.

4. Timecode: Select this option for using an external timecode source connected to the Aux/Mic In port. The 3.5 mm TRS connector is wired to receive timecode on its tip.
Also ensure Menu > Timecode > TC Mode is set to Aux TC In.

Off: Select this option to turn off the Aux/Mic Input.

MS DECODE
Choose between ISOs & Mix and Mix Only.
**KNOB PRESS**
Selects the behavior of pressing a Channel Knob. Available in Advanced Mode.
1. Ch.View: Pressing the channel knob enters the channel view. Channel Gain is automatically selected upon entry.
2. Ch.View + Solo: Pressing the channel knob enters the channel view and automatically solos the channel. Channel Gain is automatically selected upon entry.

**AMBISONICS**
MixPre-6 and MixPre-10T only. Requires plugin; see separate Ambisonics guide for more information.

**MIXASSIST**
Requires plugin. MixAssist is not available in Music or Ambisonics mode. See separate MixAssist guide for more information.

**Limiters**
The MixPre has analog limiters ensuring that even your loudest audio remains pristine.

**ON/OFF** Toggles the Limiters On or Off. While set to On the limiter is a global setting and applies to every channel.
Metering

There are five basic methods for observing input and output levels on the MixPre.

**CHANNEL KNOB RING LEDS** The brightness of the light ring indicates the level of the input. Green = signal present, red = signal peaking, orange = signal limiting. A channel’s ring LED will flash orange when in solo and glow red when the channel is muted.

**CHANNEL SCREEN METER** The Channel screen displays the isolated channel meter in the top left-hand corner.

**HOME SCREEN METERS** To switch meter views, touch the meters to cycle through the three different views. The meters will show signal levels, current arm status of each track for the recorder and limiting activity for L,R and each channel.

**METERING BALLISTICS**
Audio meter ballistics is the manner in which a visual meter responds to audio signal levels. Peak-reading ballistics correspond to actual signal peaks, but do not necessarily correspond to perceived signal loudness. Peak meters have an instant attack and slow decay and are useful in digital audio workflows where signal overload can cause immediate distortion. Volume Units (VU) meter ballistics correspond closely to how the human ear perceives loudness. VU meters provide good visual indication of how loud a signal will be, but provides poor information of actual signal peaks.

The MixPre uses a combination Peak+VU ballistics for all meters, where the perceived loudness (or VU) is simultaneously displayed as a standard bar while the peak signal is displayed as a single, independent segment above the VU.
Outs

The MixPre features multiple Output configurations for flexible recording scenarios. The Outputs menu is available in Advanced mode. In the Outputs menu, you may send any channel, Aux input, USB input or LR mix to either the outputs, mute outputs, and control gain. The MixPre-3 and MixPre-6 Stereo Out can be configured to send audio or LTC timecode.

**MIXPRE-3 & MIXPRE-6:**

**STEREO OUT MUTE** Mutes the output.

**STEREO OUT GAIN** Adjusting output gains is useful for optimizing the level feeding downstream devices such as transmitters, external mixers, PA, etc. The level of the output can be set to Off, 40 to +20 dB in 1 dB steps.

**STEREO OUT LEFT OR RIGHT** Configures output source, select from Mix L, Mix R, Isolated Channels (pre or post-fade), Aux In, or USB streaming into the MixPre from a computer.

**USB 1-6 (MIXPRE-3)** Configures output source from L,R, 1-3 (pre- or post-fade), Headphone L, R, or Output L,R.

**USB 1-8 (MIXPRE-6)** Configures output source from L,R, 1-6 (pre- or post-fade), Headphone L, R, or Output L,R.

**MIXPRE-10T:**

**L/R OUT MUTE** Mutes the output.

**X1/X2 OUT MUTE** Mutes the output.

**L/R GAIN** Adjusting output gains is useful for optimizing the level feeding downstream devices such as transmitters, external mixers, PA, etc. The level of the output can be set to Off, 40 to +20 dB in 1 dB steps.

**X1/X2 GAIN** Adjusts the level of the output from Off, 40 to +20 dB in 1 dB steps.

**LEFT OR RIGHT OUTPUT** Configures output source, select from Mix L, Mix R, Isolated Channels (pre or post-fade), Aux In, or USB streaming into the MixPre from a computer.

**LEFT, RIGHT, X1, X2 OUTPUT DELAY** Output delay is particularly useful when sending audio to video operators on a production set to ensure that audio is in sync with their camera video feeds. Outputs can be delayed from 0 to 400 ms.

**USB 1-12** Configures output source from L,R, 1-10 (pre- or post-fade, Headphone L, R, or Output L,R, X1,X2.

**TO ROUTE THE L/R AND X1/X2 STEREO OUTPUTS:**

1. Tap  
2. Tap Outputs.
3. Select any of the following:
   - L Output
   - R Output
   - X1 Output
   - X2 Output
4. From the routing matrix, select what channel to send to the output.

In addition, if you choose to send the channels to outputs, you can select either pre-fade (Channel knob has no effect) or post-fade (Channel knob controls level).
Headphone Out

The MixPre’s high quality headphone amplifier provides high power and very low noise performance so that you can accurately hear the audio, regardless of headphones or environment.

Connect headphones via 3.5 mm jack to the headphone jack (located on the right side panel). The volume of the headphones is set using the knob directly adjacent to the headphone jack.

The headphone amplifier is capable of very high output levels. Please use caution when wearing headphones as hearing damage could result with inappropriate volume levels.

When clipping occurs in the headphones, the Headphone Clip indicator appears in the top right corner of screen, over the Power Status indicator.

ACCESS THE HEADPHONE PRESET MENU
1. Enter the main menu.
2. Tap in the upper left hand corner.
3. Above this icon, the currently selected HP preset is displayed.

ADVANCED MODE - CREATING A CUSTOM HP PRESET
Select Edit HP Preset (Advanced Mode Only) to edit and name any of the User HP Presets.

ADVANCED MODE - HP SOLO
HP Solo mode provides options for single or multi-channel solo monitoring. Soloing channels is performed in the channel screens.

DISABLING RECORD BELLS IN HEADPHONES
Record bells, heard in headphones when recording is started and stopped, may be turned off. The record bells can be turned off in the Record menu.

PRESET OPTIONS BY MODEL

MIXPRE-3
Basic Mode: LR Stereo, USB 1, 2,
Advanced Mode: LR Stereo, LR Mono, USB 1, 2, and User Presets 1-4
Camera options appear when Aux In is set to Camera.

MIXPRE-6
Basic Mode: LR Stereo, USB 1, 2, USB 3,4
Advanced Mode: LR Stereo, LR Mono, USB 1, 2, and User Presets 1-4
Camera options appear when Aux In is set to Camera.

MIXPRE-10T
Basic Mode: LR Stereo, X1X2 Stereo, USB 1,2, USB 3,4, and User Presets 1-4.
Advanced Mode: LR Stereo, LR Mono, X1X2 Stereo, USB 1,2, USB 3,4, and User Presets 1-4.
Camera options appear when Aux In is set to Camera.
Using the MixPre as a USB Audio Interface

The MixPre Series perform as highly capable and pristine quality USB audio interfaces. They support up to 96 kHz sample rate at bit depths of 16 or 24.

For PC users, the MixPre will appear as a 2x2 audio interface unless a specific ASIO® driver is installed. The latest ASIO drivers are available for free at www.sounddevices.com/download

Please install the correct ASIO driver relative to your operating system.

To work with the USB audio from a host computer, it is necessary to route the USB 1 - 4 sources appropriately. To mix the USB audio from the host computer with live audio from the inputs to the LR bus, use the channel screen and select input source. To hear the USB host computer audio in the headphones only, switch the HP preset to USB 1,2 or USB 3,4.

The MixPre is capable of recording and streaming audio to a USB host simultaneously, or recording the USB audio stream out of a computer directly to its SD recorder.

When connected to a computer as a USB Audio Interface the sample rate of the MixPre is determined by the computer.

**LOW-LATENCY MONITORING** Latency has been minimized while using the MixPre as a USB interface. In situations where the throughput latency is higher than desired, the input can be directly monitored in the headphone output.
TO MONITOR WITH ZERO-LATENCY:
1. Connect via USB-C to the USB port on your computer.
2. Confirm that the LR Stereo HP Preset is selected.
3. Select USB 1 for Channel 1 source (MixPre-3), Channel 5 source (MixPre-6), or Channel 9 source (MixPre-10T) and Pan L.
4. Select USB 2 for Channel 2 source (MixPre-3), Channel 6 source (MixPre-6), or Channel 10 source (MixPre-10T) and Pan R.

OR

- Create a custom HP preset that mixes the microphone or input you want to record from with the USB 1 and/or USB 2 feed from the computer. For example, HP L = Ch1 + U1 and HP R = Ch1 + U2.
5. Connect microphone or other inputs to remaining channels.
6. Select USB 1 for Channel 1 source (MixPre-3), Channel 5 source (MixPre-6), or Channel 9 source (MixPre-10T) and Pan L.
7. Select USB 2 for Channel 2 source (MixPre-3), Channel 6 source (MixPre-6), or Channel 10 source (MixPre-10T) and Pan R.
8. Connect microphone or other inputs to remaining channels.
9. Select the appropriate inputs for remaining channels.
10. Setup your DAW software for a new track with its source being any of the available channels.
11. Disable record monitoring or mute the channel’s output in the DAW.

You should now be able to hear and adjust the output of your DAW audio through the channels you set to USB 1 and 2 on your MixPre while adjusting your low-latency feed in your headphones (and send levels to DAW) using the remaining channel knobs.

USB Output Routing

Each of the MixPre’s USB audio output streams can be sourced from any channel (pre- or post-fade), LR mix bus, headphone output or LR output and X1,X2 (on the MixPre-10T only).

MIX-MINUS SENDS

A mix-minus send is used when working with remote contributors in podcasting, conferencing and broadcast applications. It allows the remote contributor to hear the program mix, minus their own voice, the remove distracting latency.

TO SETUP UP A MIX-MINUS SEND:
1. In the Outputs>St.Out Left or St.Out Right menus (or L, R, X1, or X2 Output menus on the MixPre-10T), create a summed mix of all the channels you want to send to the remote contributor minus their own channel. You can mix the channels pre-fade or post-fade.
2. Select the Output you have configured in step 1 as the source for the USB channel you are sending to the remote contributor.
System

**MODE** Switch between Basic, Advanced and Custom.

**FILE TRANSFER** Transfer files between the MixPre and a host computer.

**USB-AUDIO** Switch between Normal or Stereo Out. The Stereo Out option allows you to set the USB Audio interface to output only 2 channels in order to increase compatibility with applications that do not support multichannel USB audio.

**USB-C (MIXPRE-3 AND MIXPRE-6 ONLY)** Switch between Power only or Audio when using with a USB-C power or audio source.

**LIMITERS** Set limiters to On or Off.

**BLUETOOTH** Switch Bluetooth on/off.

**WINGMAN PASSWORD** Set a required password for the Wingman app.

**BRIGHTNESS** Adjust the brightness of the touch screen and the ring LEDs.

**DATE/TIME**
Set current date/time and format.

**TUNE CRYSTAL (MIXPRE-1OT ONLY)** Fine tune the internal crystal frequency to an external word clock or LTC signal via BNC In.

**REGULATORY**
Provides full Federal Communications Commission (FCC) compliance information.

**VERSION**
Provides the model type, current firmware version, and serial number.

**UPDATE FIRMWARE** Update the firmware from a file on the SD card. The latest firmware can be downloaded from the Sound Devices website: www.sounddevices.com/support/downloads

*When upgrading to firmware version 7.0 or higher from any version lower than 6.0 the firmware installation process will need to be completed twice. After the first installation is complete, the MixPre will prompt you to start the second installation process.*

**PLUGINS** View and apply plugins.
Formatting Media

SD cards must be formatted by the MixPre for reliable recording and playback. Back-up any wanted audio recordings or data on the SD card before formatting. The formatting process erases all data on the SD card.

If a USB thumbdrive is inserted into the USB A port, the MixPre automatically copies the current project’s recorded files to it. The thumbdrive must also be formatted before use.

We highly recommend using Sound Devices branded SD cards as these have been optimized to provide the best performance. If these are not available, most reputable manufacturers’ cards (such as SanDisk or Delkin) that meet or exceed class 10 speeds are acceptable. Similarly, we highly recommend only using Sound Devices’ approved USB thumbdrives to ensure reliable operation. Current approved media can be found here.

All media will be formatted as exFAT. If any media is formatted differently, the MixPre will display a formatting reminder. The exFAT file system is not compatible with Windows XP or Mac OS X 10.6.4 and lower.

**FORMAT AN SD CARD**
1. Insert an SD card in the slot located on the rear panel.
2. Navigate to SD Card > Edit > Format.
3. When asked to confirm the command to format the card, touch OK.

**FORMAT A USB THUMBDRIVE (MIXPRE-10T ONLY)**
1. Connect a USB Thumbdrive to the USB-A port located on the left panel or USB hub.
2. Navigate to USB Drive > Edit > Format.
3. Confirm the command to format the card, and touch OK.

**USB AUTO-COPY**
The MixPre-10T will auto-copy to a formatted USB-A thumbdrive when inserted directly into the USB-A port or when using a USB hub. Stopping a recording will automatically copy the last recorded file to the thumbdrive. While copying, the ring LED on the MixPre-10T will flash while the process is being completed. The completion rate will display as a percentage on the bottom right corner of the status bar. If a new recording is started while auto-copying is still in progress, auto-copying will still continue.

**INTERRUPTING USB AUTO COPY WITH POWER CYCLE**
Auto-copy can be suspended during longer copying times. During auto-copy in stop mode, pressing stop or toggling the power switch to OFF brings up the following popup: “Suspend USB auto-copy? Copying will resume when record is next pressed. OK, Cancel”
If “OK” is pressed, Auto-copying is suspended and will resume copying when record is next pressed.
If “Cancel” is pressed, Auto-copying will continue until complete then power down if switch is off or sit in idle if power switch is on.

While the MixPre-10T is auto-copying, the USB Drive and SD Card menu are unavailable.
Record - Basic Mode

**PRE-ROLL TIME** Pre-roll captures audio for a set amount of time before Record is pressed, ensuring important audio is never missed. Pre-roll time decreases as sample rate increases. Choose up to 10 seconds of pre-roll at 48 kHz. At 96 kHz pre-roll is limited to a maximum of 5 seconds. At 192 kHz pre-roll is limited to a maximum of 2 seconds. Pre-roll is not available in record run mode or when using a record trigger.

**REC TRIGGER** Sets record triggering from either timecode, HDMI flag or HDMI FUJIFILM flag. The default is Off.

**RECORD BELLS** Enable or disable record bell notifications. Record bells are On by default.

Record - Advanced Mode

**REC L, R** Arms L and/or R mix buses. Choose between Off, Off & Linked, L, R, L&R, and L&R Linked.

**L GAIN** Sets the gain for the L mix.

**RIGHT GAIN** Set the gain for the R mix. This setting is disabled when Rec L,R Mix is set to LR Linked.

**SAMPLE RATE** Set the internal sample rate and sample rate of recorded WAV files. Choose between 44.1 kHz, 47.952 kHz, 48 kHz, 48.048 kHz, 96 kHz, and 192 kHz.

When Timecode Mode is set to HDMI TC In, the connected camera determines the sample rate of the MixPre II.

When using the MixPre II as a computer audio interface, the sample rate is determined by the computer.

**BIT DEPTH** Select between 16, 24, and 32 float bit depth.

**PRE-ROLL TIME** Pre-roll captures audio for a set amount of time before Record is pressed, ensuring important audio is never missed. Pre-roll time decreases as sample rate increases. Choose up to 10 seconds of pre-roll at 48 kHz. At 96 kHz pre-roll is limited to a maximum of 5 seconds. At 192 kHz pre-roll is limited to a maximum of 2 seconds. Pre-roll is not available in record run mode or when using a record trigger.

**REC TRIGGER** The MixPre may be configured to begin recording when it is triggered. Setting the Record Trigger to HDMI flag will initiate record when a compatible device issues the record flag via the HDMI input. The MixPre has two HDMI rec trigger options. HDMI flag for Sony, Panasonic, Nikon, Canon and Blackmagic cameras and HDMI FUJIFILM for FUJIFILM cameras. Setting the Record Trigger to Timecode will initiate record when the MixPre detects running LTC timecode via the Aux or BNC inputs (MixPre-10T only). Set record triggers in the Record Menu. When record triggers are used, Pre-roll is disabled. Setting the Record Trigger to Timecode will initiate record when the MixPre detects running LTC timecode via the Aux or BNC inputs (MixPre-10T only). Set record triggers in the Record Menu. When record triggers are used, Pre-roll is disabled.

**REMIX** Allows you to simultaneously play back a file and record a new L/R mix while adjusting the gains with the fader knobs. To remix a recording, turn on Remix in the Record menu. Select a file from the File List that has isolated tracks and select Remix.

**RECORD BELLS** Enable or disable record bell notifications. Record bells are On by default.
File Splits

To conform to the Broadcast WAV File standard, the maximum size of a file recorded by the MixPre is 4GB. If a recording exceeds this limit, the MixPre will automatically begin recording a new file. The recording process is seamless, meaning the two files can be joined together in post with no loss in audio.

Timecode

When timecode is enabled, it is displayed on the home screen beneath the current filename. Standard timecode is displayed as HH:MM:SS:FF. Drop-frame timecode is displayed with a semi-colon between the seconds and frames fields: HH:MM:SS;FF.

Each time you press record, the current timecode value is stored inside the Broadcast WAV file. Most popular video editing applications can read this timecode value to help sync the audio with picture.

When power is removed, the internal battery maintains accurate timecode for up to 4 hours. An alert will be issued whenever the timecode generator (in Free Run and Time of Day timecode modes) has reset due to internal battery depletion. This internal battery is automatically charged anytime the MixPre is powered on.

**TC MODE** Select between Free Run, Time of Day, Rec Run, BNC In (MixPre-10T only), Aux In 1, Aux In 2, HDMI TC In, HDMI FUJIFILM or Off.

**FRAME RATE** Select between 23.98, 24, 25, 29.97nd, 29.97dF, 30, and 30 dF. Setting the frame rate is not necessary when using BNC, Aux, or HDMI In.

**JAM** With the MixPre to Free Run and the frame rate set to the source’s frame rate, tap Source and select BNC In or Aux TC. Tap Jam TC to jam timecode. Jamming is successful if Diff = 00:00:00:00.

**SET TC** Manually set timecode.

**BNC IN** MixPre-10T only. Set BNC to Timecode or Word Clock.

**BNC OUT** MixPre-10T only. Set BNC to Timecode or Word Clock.

**SYNC REF** MixPre-10T only. Select from BNC In or Internal. When BNC In is selected, the MixPre-10T can be set to sync to an external timecode or word clock sync reference connected to BNC In.

**SET UBITS** Click “Mode” at top to edit UBits Mode. From the main screen, press in with the headphone encoder to modify the value of a UBit. Use the arrows or scroll with the encoder to select.

*It is best practice to rejam timecode devices after switching modes (Basic, Advanced or Custom) or after any setting change requiring a reboot (MixAssist, Music mode or Ambisonics).*
Timecode Modes

**MIXPRE-3 AND MIXPRE-6:**

**AUX IN** Timecode can be derived from external timecode connected to the TC In BNC or to the 3.5 mm Aux/Mic In connector.

**HDMI TC IN** Many DSLR-style cameras output timecode via HDMI. If HDMI TC In is selected without an HDMI source connected, the MixPre will report missing sync. The MixPre has two HDMI timecode modes,. HDMI flag for Sony, Panasonic, Nikon, Canon and Blackmagic cameras and HDMI FUJIFILM for FUJIFILM cameras.

*When set to HDMI TC In, the connected camera determines the sample rate of the MixPre.*

**TIME OF DAY (TOD)** Alternatively known as 24 hr run mode, this is similar to free run mode except that the timecode generator is automatically loaded with the time of day. Use TOD mode when you want the recorded WAV files to be timecode stamped with the time of day generated by the internal clock.

**OFF** Setting TC Mode to Off disables the timecode feature. When Off, the time counter below the filename region on the home screen displays elapsed time instead of timecode.

**MIXPRE-10T:**

**FREE RUN** Timecode runs continuously. Timecode continues counting accurately for up to four hours after power-down.

**REC RUN** Timecode runs while recording and is stationary when not recording. In this mode, timecode defaults to the last stationary value at power-up. When switching to Record Run from another mode, the internal generator will stop at the last timecode value. Timecode output can be used to trigger other equipment that supports timecode remote triggering to start and stop recording.

**TIME OF DAY (TOD)** Alternatively known as 24 hr run mode, this is similar to free run mode except that the timecode generator is automatically loaded with the time of day. Use TOD mode when you want the recorded WAV files to be timecode stamped with the time of day generated by the internal clock.

**BNC IN, AUX IN** Timecode can be derived from external timecode connected to the TC In BNC or to the 3.5 mm Aux/Mic In connector.

**HDMI TC IN** Many DSLR-style cameras output timecode via HDMI. If HDMI TC In is selected without an HDMI source connected, the MixPre will report missing sync. The MixPre has two HDMI timecode modes, HDMI flag for Sony, Panasonic, Nikon, Canon and Blackmagic cameras and HDMI FUJIFILM for FUJIFILM cameras.

*LTC Timecode is not present on the MixPre-10T BNC out when HDMI TC In is in use.*

*When set to HDMI TC In, the connected camera determines the sample rate of the MixPre.*

**OFF** Setting TC Mode to Off disables the timecode feature. When Off, the time counter below the filename region on the home screen displays elapsed time instead of timecode.
Presets

If you plan to use the MixPre in a wide variety of situations, you can store and recall snapshots of all of the MixPre’s settings. Setup files can be saved and recalled from the SD card or to one of four internal preset slots. You can also restore the MixPre to the factory default settings from the Presets menu.

**LOAD** Loads factory defaults or user presets from SD Card or from one of four internal slots.

**SAVE TO INT 1** Saves the current setup to internal slot 1.

**SAVE TO INT 2** Saves the current setup to internal slot 2.

**SAVE TO INT 3** Saves the current setup to internal slot 3.

**SAVE TO INT 4** Saves the current setup to internal slot 4.

**SAVE TO SD** Saves the current setup to the SD card.

Projects

**NEW** Create a custom project name or project name based on the current date. Names may be up to 18 characters long.

**OPEN** Select the required project. This will load the File List with the selected Project’s files.

**COPY** Select the project to copy to a USB-A Drive.

**TRASH PROJECT** Select which project to trash. This moves the selected project and all its files to the TRASH folder. Projects in this folder are accessible using a computer. You can permanently delete projects in the SD card’s TRASH folder using a computer or by formatting the card.

**CREATE REPORT** The MixPre includes the ability to create a CSV sound report file for the active project. It contains useful descriptive information about the project settings and all its recorded files. This can be used as a log of your recording session or as an electronic report that you can send along with your audio files to post-production or a client. The CSV sound report file is stored in the active project’s folder alongside audio files and is named as follows: ActiveProject-Name_Report.csv

**REPORT INFO** The MixPre can customize the sound report’s descriptive header information to include various project details, such as Producer, Director, Job, Name, Location, Phone, E-mail, Client, etc. Enter details for each info item using the on-screen virtual keyboard, a USB keyboard. If items are blank, they will not be included in the report file.
File List - Basic Mode

TO ACCESS THE FILE LIST
1. Touch the filename at the top of the Home screen.
2. Scroll through the chronological list of all files in an active project with the headphone encoder. The top item in the list is the next file to be recorded. Directly below that is the last recorded file or file currently being recorded, followed by all previously recorded files.
3. Press Edit or push the headphone encoder in to access submenus for each file.

TO PLAYBACK A FILE FROM THE LIST
Scroll to a file and press Play to play it back.

NAME Edit the file’s name.
NUMBER Edit the file’s number. File numbers are reset to 001 when a new Project is created.
File List - Advanced Mode

TO ACCESS THE FILE LIST
1. Touch the filename at the top of the Home screen.
2. Scroll through the chronological list of all files in an active project with the headphone encoder. The top item in the list is the next file to be recorded. Directly below that is the last recorded file or file currently being recorded, followed by all previously recorded files.
3. Press Edit or push the headphone encoder in to access sub-menus for each file.

TO PLAYBACK A FILE FROM THE LIST
Select a file and press Play to play it back.

UNDO Undo moves the last recorded file to the SD card’s UNDO folder and resets the number of the next file. Files in this folder are accessible using a computer.

NAME, NUM, NOTES Edit the file’s name, number, and, in advanced mode, make notes. File numbers are reset to 001 when a new Project is created.

TRACK NAMES Edit track names within a file.

RENAME Rename the file’s name and number.

TRASH FILE Deletes the file.

CUE LIST Brings up list of all cue marks added during record or playback. Name, move, and delete cue marks on this list.
Cue Marks

Cue marks make it easy to quickly locate points of interest within a file. A maximum of 99 cues are allowed per file. Cues appear in numerical order in the Cue List.

ADD A CUE MARK

1. During recording, playback, or pause, tap \(Q\) to add a cue mark. The Q icon is found at the top of the Home screen.
2. A cue mark number (starting from 01 and incrementing each time a new cue mark is added) is displayed next to the Q icon.

The MixPre automatically rennumbers cue marks when inserted between existing cue marks. This maintains the cue markers ascending numerical order from start to finish—01, 02, 03, etc.

ACCESS THE CUE LIST

1. Tap \(M\).
2. Use the Headphone knob to select a file (or highlight a file and tap Edit).
3. Tap Cue List from the Edit menu.
4. Cues may be played, named, moved, or deleted.

PLAYBACK FROM A CUE MARK

1. From the Cue List, use the Headphone knob to highlight a cue.
2. Press Play.

NAME A CUE MARK

1. From the Cue List, use the Headphone knob to select a cue mark.
2. Tap Name.
3. Enter a new name then tap Ok.

MOVE A CUE MARK

You can finely tune the position of cue marks in 0.1 second increments.
1. From the Cue List, use the Headphone knob to select a cue mark.
2. Tap Move
3. Turn the Headphone knob to adjust the selection in 0.1 second increments.
4. Press the Headphone knob to save the new cue position.

DELETE A CUE MARK

1. From the Cue List, use the Headphone knob to select a cue mark.
2. Tap Delete.
Using Star Shortcuts (*/**)  

**MIXPRE-6**  
For your convenience, we have included a front panel programmable button. This lets you dedicate a hardware shortcut to frequently used functions without having to navigate the menus. Program the * button in the *Button menu. 

**MIXPRE-10T**  
For your convenience, we have included a two-position programmable toggle switch on the front panel. This lets you dedicate hardware shortcuts to frequently used functions. Program the * and ** switch in the *Shortcuts menu. 

**PROGRAMMABLE FUNCTIONS** 
1. Ch 5/6 Screen Toggle (MixPre-6)  
2. Ch 9/10 Screen (MixPre-10T)  
3. Solo/Mute screen  
4. Project screen  
5. SD Card screen  
6. Undo  
7. Slate Mic  
8. Tone  
9. Q  
10. St Out Mute (MixPre-6)  
11. L/R Mute (MixPre-10T)  
12. X1/X2 Mute (MixPre-10T)
Wingman Application
Sound Devices Wingman is a free app that allows wireless remote control of the Bluetooth Smart-enabled MixPre Series from iOS or Android devices.

VIEWING AREA
On smaller devices, the viewing area displays transport and track views. Swipe horizontally to toggle between views. On larger devices, the viewing area shows only transport view.

TRANSPORT VIEW
Displays control buttons, metadata fields, and meters. Swiping vertically toggles to other meters. On larger devices, arming and naming of tracks is done in transport view.

TRACK VIEW
On smaller devices, arming and naming of tracks is done in track view.

RENAMEING TRACKS
1. On large mobile devices, from the Transport view, tap anywhere in a vertical meter for the track you want to edit.
2. On small mobile devices, swipe horizontally to display the Track view, then tap anywhere in a horizontal meter for the track you want to edit.
3. Use the virtual on-screen keyboard to modify the track name.
4. Tap Done when finished to save the changes.
5. Tap anywhere on screen other than the keyboard to exit without saving changes.

ARMING/DISARMING TRACKS
1. Tap the meter label. When armed the label turns red. When on but disarmed, the label is gray. When the input is off, the label is black and cannot be armed.
2. Meter labels are joined (displayed as a single label) to indicate when channels are linked.
**CONNECTION ICON**
Tap the Connection icon to efficiently switch connection from one device to another from within the app. Tapping the Circled-I icon helps identify a listed MixPre by displaying an “Identifying from Wingman” message on the chosen recorder’s screen.

**CONNECTION ICON STATUS COLORS**

<table>
<thead>
<tr>
<th>Color</th>
<th>Status Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gray</td>
<td>Disconnected - either no activity or scanning for devices</td>
</tr>
<tr>
<td>Orange</td>
<td>Bluetooth connection in progress</td>
</tr>
<tr>
<td>Yellow</td>
<td>Connected - authentication underway</td>
</tr>
<tr>
<td>Green</td>
<td>Connected and authenticated</td>
</tr>
</tbody>
</table>

**ENABLE BLUETOOTH ON THE MIXPRE**
This toggles Bluetooth On and Off. If a remote password is configured on the recorder in the System>Wingman Password menu, Wingman will prompt for that password to be entered prior to making the connection.

**SET AND CLEAR THE WINGMAN PASSWORD**
For added security, set up the MixPre recorder to require a password for remote access. Use the virtual keyboard or a USB keyboard to enter a password up to 18 alpha-numeric characters. Punctuation other than a hyphen or an underscore is not permitted.

**FILE LIST TAB**
MixPre files and their embedded BWF/iXML metadata can be viewed and edited in the File List tab.

**SOUND REPORT**
Sound reports can be created and sent direct from Wingman as CSV files.
USB Hub

The MixPre will support multiple USB devices such as USB thumb drives, Midi controllers, and/or USB Keyboards via a USB hub. To maximize USB hub support, note:

Powered hubs are recommended as these can deliver appropriate current.

If using non-powered hubs, do not connect more than three low power devices.

Connect each USB device individually rather than all at once. The peak current of all three devices at once may exceed the max peak current of the supply.

If devices are randomly dismounting there is not enough current to power all the attached devices. Remove one or more devices or use a powered hub.

USB-A support (with or without hub) is only available when MixPre is fully powered and not in low power mode.

Only one USB controller can be used at a time.

Only one USB drive can be used at a time (MixPre-10T only)

When using non-powered hubs with the MixPre-3 or MixPre-6, use an L-mount battery, a 4-pin Hirose DC adapter (e.g. from Hawkwoods), a USB-C wall adapter, or USB-C battery pack (e.g. from Anker or Ravpower). USB-C from a computer may not provide sufficient power to operate all USB devices connected to a non-powered USB hub.

The USB-A port does not support hubs when being powered from AA batteries.

Use a high quality USB-C to C cable when powering from a USB-C power source, preferably one meter or less. Low quality USB-C cables could cause erratic behavior.
USB Keyboard

A connected USB keyboard may be used as a wired remote control for certain functions. Holding a keyboard function for longer than 0.5 seconds will repeat the shortcut action.

X-KEYS® PROGRAMMABLE KEYPADS, STICKS & KEYBOARDS

X-keys include a variety of compact, tactile input devices that can be programmed to emulate USB keyboard commands. Their various buttons and tactile controls are programmed via P.I. Engineering’s MacroWorks Windows software. When mapped as individual commands or as macro commands to MixPre’s USB Keyboard shortcuts listed above, they offer quick-access to many MixPre functions including Record, Stop, Play, and many more.

To use with MixPre, the X-Keys device must be connected to the MixPre’s USB-A port.

Please visit P.I. Engineering’s website for more information.
USB Controllers

The MixPre Series can be connected to select third party controllers for tactile control of mixing and recording. These control surfaces provide a varied range of physical sliders, pots, and buttons to set fader levels, trim gains, pans, reverb sends, solos, mutes, record arming, transport control and more. Functionality varies depending on controller model. When connected to the MixPre, some functions are taken over by the controller and are therefore disabled on the MixPre.

COMPATIBLE RECORDERS
1. Korg NanoKontrol Studio
2. Korg NanoKontrol 2
3. Novation LaunchControl XL
4. AKAI MidiMix

CONNECTING THE MIXPRE TO A CONTROLLER
Power and control is provided via a single USB cable to better facilitate simple connection between the MixPre and controller. For the MixPre-3 and -6, USB Controllers will only function if the MixPre is adequately powered.

1. The MixPre may be powered on before USB connection or may be turned on after USB connection.
2. Connect one end of a USB cable to the MixPre’s USB-A port and the other end to the controller’s USB port, which can be a USB-B, Micro USB, or Mini USB port, depending on the controller model. We recommend using the USB cable supplied with the controller.
3. A popup screen displays the controller model. After a few seconds of configuration, the popup closes and the controller is ready to use.

MAP USER-DEFINABLE BUTTONS TO FUNCTIONS
1. Connect a controller.
2. On the MixPre, access Menu > * Shortcuts > Control Surface
3. Set any of the user-definable shortcut buttons to the assignable functions listed below.

ASSIGNABLE FUNCTIONS
1. Tone
2. L/R Mute
3. X1/X2 Mute
4. Undo
5. Slate Mic
6. Add Q
7. Record
8. Stop
9. Play
10. Rewind
11. Fast Fwd
12. Shuttle (not all controllers)

Mounting to a Camera or Tripod

All MixPre Series recorders have ¼-inch, 20-threaded screw mounts on their top and bottom panels for mounting to gear.

To attach your MixPre between a camera and tripod:

1. Remove the battery sled to gain access to the back panel.
2. Retrieve the anti-rotation pin and Allen wrench. Both are magnetically held in place in the back panel.
3. From the MixPre’s bottom panel, insert the Allen wrench into the mounting screw hole and push up to reveal the retractable screw. Rotate to screw the MixPre into place underneath the camera.
4. Align the mounting screw hole on the bottom panel of the MixPre with the screw on the tripod plate. Rotate the screw on the tripod plate until the MixPre is affixed.

If your camera has a slot for the anti-rotation pin, screw the pin into place on top of the MixPre, and then position the MixPre against the bottom of the camera so that the pin fits into the camera’s slot. The anti-rotation pin may also be screwed into a tripod and slotted into the bottom of the MixPre.
MixPre-3 Specifications

Specifications are subject to change without prior notice. For the latest information available on all Sound Devices products, visit our website: www.sounddevices.com.

**FREQUENCY RESPONSE**
10 Hz to 40 kHz +/- 0.5 dB re 1 kHz @ 96 kHz sample rate

**THD + NOISE**
0.005% max (@1kHz, 22-22kHz BW, gain=20dB, -10dBu in)

**ADC**
32 bit precision; 120dB dynamic range min (A-weighted, gain=10dB, fader=0dB)

**EQUIVALENT INPUT NOISE**
-130dBV (-128dBu) max (A-weighting, gain=76dB, 150 ohm source impedance)

**INPUTS**
- Mic: XLR active-balanced; 4k input Z
- Line: XLR active-balanced; 4k input Z
- Aux/Mic in: 3.5 mm TRS, 2-channel unbalanced; 2.2k
- USB Audio: 2 channels
All inputs fully RF-filtered and overload protected

**GAIN**
- Mic input: +6 dB to +76 dB
- Line input: -20 dB to +30 dB
- Fader: -inf to +20 dB
- Headphone: -inf to +20 dB
- Total, Mic-to-recording (max): +96 dB
- Aux In (Mic): Gain = +10 dB to +40 dB
- Aux In (Line): Gain = -10 dB to +20 dB
- Total Aux Gain including Fader (Mic-to-recording): +60 dB

**MAXIMUM INPUT LEVEL**
- Mic XLR: +14 dBu (limiters on or off)
- Line XLR: +40 dBu (limiters on or off)
- Aux In (Mic): -10 dBu
- Aux In (Line): +10 dBu

**LOW-CUT FILTERS**
40 Hz to 160 Hz (adjustable), 18 dB/oct. First stage analog, subsequent stages digital

**LIMITERS**
Limiter at all gain stages, range > 40 dB
First stage analog, subsequent stages digital

**MICROPHONE POWERING**
- Mic XLRs: 48 V via 6.8k resistors, 10 mA each
- Mic 3.5 mm: 3 V @ 3k source

**STEREO OUTPUT**
3.5 mm TRS stereo unbalanced, 500 ohm output impedance, +7.8 dBu max output level

**HEADPHONE OUTPUTS**
3.5 mm TRS stereo unbalanced, 300 mW + 300 mW, for use with any impedance headphones

**DAC FEEDING STEREO OUT, HEADPHONE OUT**
32 bit precision; 115 dB dynamic range (A-weighted)

**OUTPUT LIMITERS**
Digital

**USB**
Audio Interface (USB-C): 6-in/2-out (from computer); 44.1 kHz/48 kHz/96 kHz; 16/24-bit; Class-compliant USB 2.0 high speed or ASIO (supplied)
Mass Storage (USB-C): USB 2.0 high speed
Keyboard (USB-A): Text entry and control
Midi Control Surface (USB-A)
USB Hub

**RECORDING**
- Type: SD, SDXC, SDHC Card
- Max Storage Size: 512 GB (SDXC)
- FAT32 formatted (32GB or less), exFAT for (>32GB), on-board memory card formatting

**FILE DELIVERY TO CLOUD**
Compatible with Viviana Cloud

**TIMECODE**
- Modes: Time of Day (file stamped w/current ToD), Ext LTC (file stamped w/incoming LTC on 3.5mm Aux In), HDMI TC (file stamped w/incoming TC from HDMI & sample clock synched from HDMI sample clock). Only works on specific cameras that support HDMI TC
- Frame Rates: auto-detects (fps): 23.98 (same as 23.976), 24, 25, 29.97DF, 29.97ND, 30
- 3.5 mm Aux In Timecode Input: 20k ohm impedance, 0.3 V - 3.0 V p-p (-17 dBu - +3 dBu)

**POWER**
- AA Batteries: 4x AA sealed (included); 8x AA sealed (optional accessory).
- Energizer Ultimate Lithium recommended
- L-Mount: Optional sled for 2x (hot-swappable) Li-ion batteries
- From computer: Bus-powered via USB-C port: included MX-USBY cable, connects one USB-C to two USB-A ports, optional USB C to USB C cable
- AC Adapter: MX-PSU (optional) Power supply wall adapter w/ USB-C connector; 15 W; has 4 adapter plugs for US, UK, AU & Europe

**REMOTE CONTROL**
Bluetooth Smart: Wireless control using Wingman app
HDMI (micro): Auto-record start/stop trigger from cameras with output record flag over HDMI
Timecode: Auto-record start/stop trigger via Aux In timecode

**ENVIRONMENTAL**
- Operating: 20°C to 60°C, 0 to 90% relative humidity, (non-condensing)
- Storage: -40°C to 85°C

**DIMENSIONS AND WEIGHT**
- 36 mm x 144 mm x 110 mm (H x W x D); 1.40” x 5.68” x 4.35”
- Weight: 48 kg; 16.8 oz. (unpacked, without batteries)
- Touch Screen: 320x240; 1.6-inch, color, sunlight-viewable IPS LCD

*patents #US9654134B2 (USA), #CA2973142C (Canada), and #EP3259845 (Europe)

**FILE DELIVERY TO CLOUD**
Compatible with Viviana Cloud

**TIMECODE**
Modes: Free Run, Time of Day (file stamped w/current ToD), Rec Run, Ext LTC (file stamped w/incoming LTC on BNC or 3.5mm Aux In), HDMI TC (file stamped w/incoming TC from cameras that output TC)
Accuracy: 0.1 ppm (0.25 frame in 24 hr)
Frame Rates: auto-detects (fps): 23.98 (same as 23.976), 24, 25, 29.97DF, 29.97ND, 30, 30DF
Sync Source: Internal, Word Clock, Ext LTC
BNC In (TC In): switchable between Timecode (default) or Word Clock
Input: 20k ohm impedance, 0.3 V - 3.0 V p-p (~17 dBu - +3 dBu);
Word Clock: 5k ohm impedance, 1.5V p-p
BNC Out (TC Out): switchable between Timecode (default) or Word Clock
Output: 1k ohm impedance, 3.0V p-p (+12 dBu); Word Clock: 75 ohm impedance, 5 V p-p
TC Reader via HDMI

**POWER**
AA Batteries: 8x AA sled (included); Energizer Ultimate Lithium recommended
L-Mount: Optional sled for 2x (hot-swappable) Li-ion batteries
AC Adapter: XL-WPH3 (included): Universal, 45 W in-line AC-to-DC power supply Hirose 4-pin DC plug, with detachable IEC power cord; 100-240, 50/60Hz
External: 10-18 V on locking 4-pin Hirose connector, pin-4= (+), pin-1=(-)

**REMOTE CONTROL**
Bluetooth Smart: Wireless control using Wingman app
HDMI (micro): Auto-record start/stop trigger from cameras with output record flag over HDMI
Timecode: Auto-record start/stop trigger via Aux In timecode
Keyboard (USB-A): Text entry and control

**ENVIRONMENTAL**
Operating: -20°C to 60°C, 0 to 90% relative humidity; (non-condensing)
Storage: -40°C to 85°C

**DIMENSIONS AND WEIGHT**
36 mm x 206 mm x 175 mm (H x W x D); 1.40” x 8.15” x 6.88”
Weight: 0.91 kg; 32.1 oz. (unpackaged, without batteries)
Touch Screen: 320x256; 1.6-inch, color, sunlight-viewable IPS LCD

*patents #US9654134B2 (USA), #CA2973142C (Canada), and #EP3259845 (Europe)**
Software License

End-user license agreement for Sound Devices MixPre Series Software / Embedded Firmware

Important Read carefully:
This Sound Devices, LLC end-user license agreement (“EULA”) is a legal agreement between you (either an individual or a single entity) and Sound Devices, LLC for the Sound Devices, LLC software product identified above, which includes computer software, embedded firmware, and may include associated media, printed materials, and “online” or electronic documentation (“SOFTWARE PRODUCT”). By using, installing, or copying the SOFTWARE PRODUCT, you agree to be bound by the terms of this EULA. If you do not agree to the terms of this EULA, do not use or install the SOFTWARE PRODUCT.

Software Product License
The SOFTWARE PRODUCT is protected by copyright laws and international copyright treaties, as well as other intellectual property laws and treaties. The SOFTWARE PRODUCT is licensed, not sold.
Grant of license. This EULA grants you the following limited, non-exclusive rights: In consideration of payment of the licensee fee, Sound Devices, LLC, as licensor, grants to you, the licensee, a non-exclusive right to use this copy of a Sound Devices, LLC software program (hereinafter the “SOFTWARE”) on a single product and/or computer. All rights not expressly granted to licensee are reserved to Sound Devices, LLC.
Software ownership. As the licensee, you own the hardware on which the SOFTWARE is recorded or fixed. Sound Devices, LLC shall retain full and complete title to the SOFTWARE and all subsequent copies of the SOFTWARE, regardless of the media or form on or in which the original copies may exist. The license is not a sale of the original SOFTWARE.

Two Level Segregated Fit memory allocator, version 3.1. Written by Matthew Conte http://tlsf.baisoku.org
Based on the original documentation by Miguel Masmano: http://www.gii.upv.es/tlsf/main/docs
This implementation was written to the specification of the document, therefore no GPL restrictions apply.

Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution. Neither the name of the copyright holder nor the names of its contributors may be used to endorse or promote products derived from this software without specific prior written permission.
** THIS SOFTWARE IS PROVIDED BY THE COPYRIGHT HOLDERS AND CONTRIBUTORS “AS IS” AND
** ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED
** WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE
** DISCLAIMED. IN NO EVENT SHALL MATTHEW CONTE BE LIABLE FOR ANY
** DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES
** (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES;
** LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND
** ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT
** (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS
** SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

Copyright
All rights, title, and copyrights in and to the SOFTWARE PRODUCT (including, but not limited to, any images, photographs, animations, video, audio, music, text, and “applets” incorporated into the SOFTWARE PRODUCT) and any copies of the SOFTWARE PRODUCT are owned by Sound Devices, LLC or its suppliers. The SOFTWARE PRODUCT is protected by copyright laws and international treaty provisions. Therefore, you must treat the SOFTWARE PRODUCT like any other copyrighted material, except that you may make copies as only provided below. You may not copy the printed materials accompanying the SOFTWARE PRODUCT.
Restrictions on use. Licensee may not distribute copies of the SOFTWARE or accompanying materials to others. Licensee may not modify, adapt, translate, reverse engineer, decompile, disassemble, or create derivative works based on the SOFTWARE or its accompanying printed or written materials.
Transfer restrictions. Licensee shall not assign, rent, lease, sell, sublicense, or otherwise transfer the SOFTWARE to another party without prior written consent of Sound Devices, LLC. Any party authorized by Sound Devices, LLC to receive the SOFTWARE must agree to be bound by the terms and conditions of this agreement.

Termination
Without prejudice to any other rights, Sound Devices, LLC may terminate this EULA if you fail to comply with the terms and conditions of this EULA. In such event, you must destroy all copies of the SOFTWARE PRODUCT and all of its component parts.
Limited Warranty

No warranties. Sound Devices, LLC expressly disclaims any warranty for the SOFTWARE PRODUCT. The SOFTWARE PRODUCT and any related documentation is provided “as is” without warranty or condition of any kind, either express or implied, including, without limitation, the implied warranties and conditions of merchantability, fitness for a particular purpose, or non-infringement. The entire risk arising out of use or performance of the SOFTWARE PRODUCT remains with you.

No liability for damages. In no event shall Sound Devices, LLC or its suppliers be liable for any damages whatsoever (including, without limitation, damages for loss of business profits, business interruption, loss of business information, or any other pecuniary loss) arising out of the use of or inability to use this Sound Devices, LLC product, even if Sound Devices, LLC has been advised of the possibility of such damages. In any case, Sound Devices, LLC’s entire liability under any provision of this evaluation license shall be limited to the greater of the amount actually paid by you for the SOFTWARE PRODUCT or U.S. $5.00. Because some states/jurisdictions do not allow the exclusion or limitation of liability for consequential or incidental damages, the above limitation may not apply to you.

Governing Law

This agreement and limited warranty are governed by the laws of the state of Wisconsin.

FCC & ISED Compliance Statements

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. FCC Part 15.19 (a) (3)

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

FCC Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC & ISED User Statement

This device complies with FCC and ISED RF Exposure SAR limits exposure limits for general population / uncontrolled exposure.

Cet appareil est conforme à la norme FCC et USED RF Exposure SAR limite les limites d’exposition pour la population générale / l’exposition incontrôlée.

This Device complies with Industry Canada License-exempt RSS standard(s). Operation is subject to the following two conditions: 1) this device may not cause interference, and 2) this device must accept any interference, including interference that may cause undesired operation of the device.

Cet appareil est conforme avec Industrie Canada, exempts de licence standard RSS (s). Son fonctionnement est soumis aux deux conditions suivantes: 1) ce dispositif ne peut pas causer d’interférences, et 2) ce dispositif doit accepter toute interférence, y compris les interférences qui peuvent causer un mauvais fonctionnement de l’appareil.
